October 1, 2015

Dear Consolidated Koshkonong Sanitary District Customer:

This Consolidated Koshkonong Sanitary District will be conducting in-home sump pump inspections for all customers in the District. The purpose of this inspection is to find sump pumps that are connected to the system through your sewer lateral. There are customers within the District that may not know that their sump pumps are hooked to the sewer or how to fix it.

The District's Discharge Permit contains a Schedule of Compliance that is governed by the Department of Natural Resources (DNR). This schedule sets limits and time frames for parameters that must be met; included in this is a treatment plant evaluation. It is inevitable that the District will have to do a treatment plant upgrade in the near future to meet new regulations set forth by the DNR. Treating clear water that enters through the system has a huge impact on the overall operation, capacity and cost of treatment. The cost is reflected in the quarterly user charge that is billed to the customers. Treating clear water is expensive and with some diligence can be reduced through inspections like this.

The District is asking its customers to please contact the District at 608-868-7191 or lcksd@centurytel.net to schedule your in-home inspection. Thank you for your cooperation in this matter. We look forward to hearing from you.

Sincerely,

CONSOLIDATED KOSHKONONG SANITARY DISTRICT
